

CURRENT VIEW

Remote access to gauge data in real time

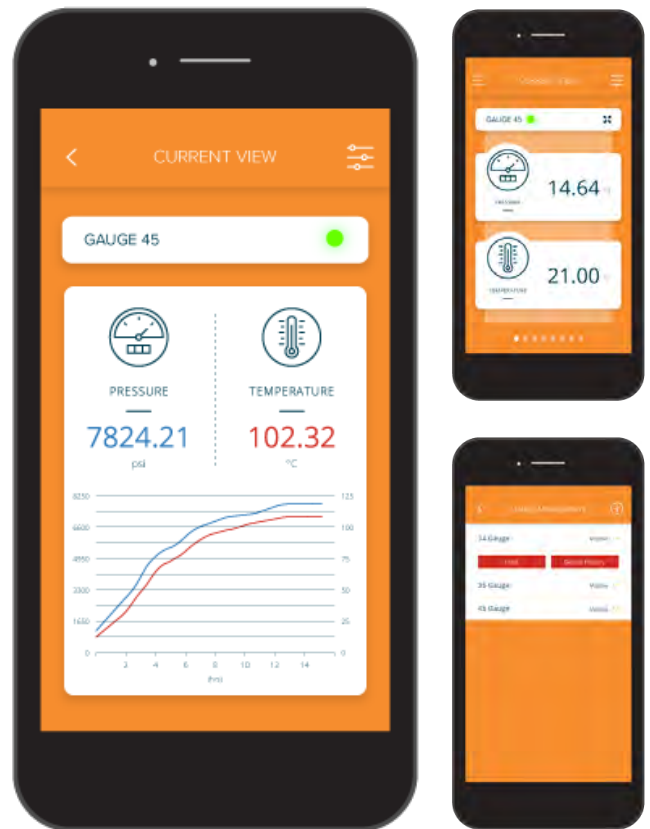

Current View reduces installation time by providing real time remote access to gauge data while running in hole. Thus preventing costly and dangerous pauses in critical operations to survey the gauges.

Features

- Provides a real time and historical view of the installation.
- Establishes a local WIFI connection allowing multiple users to monitor pressure and temperature readings.
- Stores historical job data that can quickly be sent to operators to confirm installation success.

Benefits

- Quickly View gauge status while running downhole which prevents stopping operation to verify gauge readings.
- Status can be viewed remotely by support personal.
